

Activity 3 Instruction Manual

Activity 3 | Topic 01 | C013 | Version v1.0

Purpose

The charter authorises the project and gives the PM the right to apply resources. You will generate a full charter with GenAI and then correct it against what a charter must actually contain.

Files used

- activity-guide.md and activity-guide.pdf - brief and source instructions
- prompts.pdf - reusable prompt and verification checklist
- mock-data.xlsx - safe fictional project data for practice

Expected output

An approved-quality Project Charter for your group's project.

Before you begin

1. Form the required group and assign one person to capture evidence.
2. Open mock-data.xlsx and review the title, note and column headings.
3. Open prompts.pdf beside your chosen GenAI tool. Do not upload confidential workplace data.

Detailed procedure

1. Stay in your group of 3-5 and open 'Project Charter Template.xlsx' from the template pack.
2. Prompt GenAI: 'Write a project charter for launching an internal knowledge-sharing platform. Include objectives, scope, risks, stakeholders, and success criteria.' - or substitute your own project.
3. Check the draft against the required charter contents: sponsor, project manager and key stakeholders named; project description with measurable objectives; business need and financial goals; summary milestone schedule; assumptions, constraints and boundaries; approval requirements and approved budget; success and exit criteria.
4. List every element the AI omitted or left vague. In practice it will usually invent a budget and skip exit criteria.
5. Prompt it again to fix precisely those gaps: 'Revise the charter. Add measurable success criteria, explicit exit criteria, and mark every figure you assumed with [ASSUMPTION].'
6. Replace each [ASSUMPTION] with your group's own figure, then fill in Project Charter Template.xlsx.
7. Use the Persona pattern to stress-test it: 'Act as the project sponsor. Review this charter and list the three questions you would ask before signing it.' Answer those three questions in your charter.
8. Share your charter with the class and state which part GenAI got most wrong.

Use the supplied mock data

Copy only the rows needed for the current step and tell the model the data is fictional. If the model changes an identifier or number, reject the change and rerun with an explicit preserve-values instruction.

Quality control

- Your charter names a sponsor and PM, has measurable objectives and explicit success AND exit criteria, and contains no unmarked AI-invented figures.
- Compare the first AI draft with the final human-corrected artifact and retain both as evidence.
- Label assumptions, decisions, owners and dates so another project manager can audit the result.

Troubleshooting

If the response is generic, add the project objective, constraints, audience and required columns. If arithmetic is inconsistent, request formulas and substitutions, then calculate independently. If a source cannot be opened, remove the claim or replace it with verified evidence.

Submission evidence

Submit the completed project artifact, the final prompt, a short critique of the AI output, and any screenshot or exported file required by the activity.
