

Activity 4 Instruction Manual

Activity 4 | Topic 01 | C013 | Version v1.0

Purpose

Projects fail on stakeholders more often than on technology. You will use GenAI to generate a stakeholder register, then map power against interest and decide an engagement strategy for each.

Files used

- activity-guide.md and activity-guide.pdf - brief and source instructions
- prompts.pdf - reusable prompt and verification checklist
- mock-data.xlsx - safe fictional project data for practice

Expected output

A stakeholder register, a power/interest map and a Stakeholder Engagement Assessment Matrix.

Before you begin

1. Form the required group and assign one person to capture evidence.
2. Open mock-data.xlsx and review the title, note and column headings.
3. Open prompts.pdf beside your chosen GenAI tool. Do not upload confidential workplace data.

Detailed procedure

1. In your group, open 'Stakeholder Impact Over Influence Matrix.xlsx' from the template pack.
2. Prompt GenAI: 'Identify potential stakeholders and their influence/interest levels for a new city-wide bike-sharing system.' - or use your own project.
3. Add the stakeholders GenAI missed. It reliably finds obvious internal roles and misses regulators, unions, adjacent departments and the people who lose something if the project succeeds.
4. Plot each stakeholder on the matrix: X-axis = Influence, Y-axis = Interest. Agree the four quadrant strategies - manage closely, keep satisfied, keep informed, monitor.
5. Now apply the Saliency Model. Prompt: 'Assess each stakeholder for power, legitimacy and urgency, and classify them as definitive, dominant, dangerous, dependent, discretionary, demanding or dormant.'
6. Place each stakeholder into the correct saliency category in Saliency Model Template.pptx and reconcile any disagreement with your power/interest map.
7. Open 'Stakeholder Engagement Assessment Matrix.xlsx'. Prompt GenAI: 'List stakeholders for this project and recommend their current and desired engagement levels (Unaware, Resistant, Neutral, Supportive, Leading) with a matching engagement strategy for each.'
8. Mark C for current and D for desired against each stakeholder, and write the specific action that closes each gap. Share with the class.

Use the supplied mock data

Copy only the rows needed for the current step and tell the model the data is fictional. If the model changes an identifier or number, reject the change and rerun with an explicit preserve-values instruction.

Quality control

- Every stakeholder has a quadrant, a salience category, a current and desired engagement level, and one named action to close the gap.
- Compare the first AI draft with the final human-corrected artifact and retain both as evidence.
- Label assumptions, decisions, owners and dates so another project manager can audit the result.

Troubleshooting

If the response is generic, add the project objective, constraints, audience and required columns. If arithmetic is inconsistent, request formulas and substitutions, then calculate independently. If a source cannot be opened, remove the claim or replace it with verified evidence.

Submission evidence

Submit the completed project artifact, the final prompt, a short critique of the AI output, and any screenshot or exported file required by the activity.
