

Activity 16 Instruction Manual

Activity 16 | Topic 02 | C013 | Version v1.0

Purpose

Delivery problems are usually people problems. You will use GenAI to prepare for a difficult conversation and to select a conflict management approach - while judging where AI advice on people is genuinely useful and where it is not.

Files used

- activity-guide.md and activity-guide.pdf - brief and source instructions
- prompts.pdf - reusable prompt and verification checklist
- mock-data.xlsx - safe fictional project data for practice

Expected output

A prepared difficult conversation and a team development plan mapped to Tuckman's stages.

Before you begin

1. Form the required group and assign one person to capture evidence.
2. Open mock-data.xlsx and review the title, note and column headings.
3. Open prompts.pdf beside your chosen GenAI tool. Do not upload confidential workplace data.

Detailed procedure

1. In your group, pick a realistic delivery challenge: a team member missing commitments, two members in open conflict, or a team stuck in the storming stage.
2. Locate your team on Tuckman's ladder - Forming, Storming, Norming, Performing or Adjourning - and prompt GenAI: 'My project team is in the [stage] stage and showing [behaviours]. What leadership actions move them to the next stage?'
3. Now prepare a difficult conversation using the Reflection pattern: 'I need to give feedback to a team member who [situation]. They are talented and I want this to help their development. Explain the reasoning and assumptions behind your recommendation for approaching this meeting.'
4. Evaluate the advice critically. It will be reasonable but generic - it knows nothing about this person, your relationship, or your culture. Note precisely which parts you would not use.
5. Review the five conflict management approaches - Smooth/Accommodate, Withdraw/Avoid, Compromise/Reconcile, Force/Direct, Collaborate/Problem Solve - and prompt GenAI to recommend one for your situation with its reasoning.
6. Challenge it: 'When would Force/Direct be the right choice here?' A good PM knows collaboration is not always correct - safety and deadline-critical decisions sometimes require directing.
7. Open <https://alfredang.github.io/scrum/> - one member clicks 'Create Workspace', selects a role (Product Owner, Scrum Master, Developer, Stakeholder or Agile Coach) and shares the workspace ID; everyone joins with their own role.
8. Run a retrospective in the studio on your delivery challenge, using GenAI to suggest retrospective prompts. Use the Export panel to download the workspace as CSV or a printable HTML report as your evidence.

9. Discuss as a group: what should a PM never delegate to GenAI when it concerns a specific person?

Use the supplied mock data

Copy only the rows needed for the current step and tell the model the data is fictional. If the model changes an identifier or number, reject the change and rerun with an explicit preserve-values instruction.

Quality control

- You have a conversation plan you would actually use, a named conflict approach with justification, an exported retrospective file, and a clear line on what not to delegate to AI.
- Compare the first AI draft with the final human-corrected artifact and retain both as evidence.
- Label assumptions, decisions, owners and dates so another project manager can audit the result.

Troubleshooting

If the response is generic, add the project objective, constraints, audience and required columns. If arithmetic is inconsistent, request formulas and substitutions, then calculate independently. If a source cannot be opened, remove the claim or replace it with verified evidence.

Submission evidence

Submit the completed project artifact, the final prompt, a short critique of the AI output, and any screenshot or exported file required by the activity.
