

Activity 19 Qualitative Risk Analysis with GenAI

Activity 19 | Topic 03 | C013 | Version v1.0

Course: Generative AI for Project Management (C013) Topic 03: Managing Project Risks
with GenAI Learning outcome: LO3 - Prioritise risks by probability and impact for further action. Tools: GenAI tool
| Probability and Impact Matrix template

Goal

You cannot act on fifty risks. Qualitative analysis prioritises them so you spend your attention where it matters - and you will test how consistent GenAI's scoring actually is.

What you'll produce

A scored probability/impact matrix with a prioritised risk shortlist.

Core prompt

Score each supplied risk for probability and impact from 1 to 5, calculate the risk score, place it in a

Step-by-step

1. Take your risk register from Activity 18. Prompt GenAI: 'Score each risk for probability (1-5) and impact (1-5), calculate the risk score, and place each in a probability/impact matrix.'
2. Run the same prompt a second time in a new chat. Compare the two sets of scores - you will find they differ. Discuss what that inconsistency means for relying on AI scoring.
3. Agree your group's own scores for the top ten risks. Use GenAI's output as a prompt for discussion, not as the answer.
4. Plot the risks on the probability/impact matrix and identify the red zone - high probability, high impact - that needs a response plan.
5. Apply the additional risk factors to your top five: urgency, proximity, dormancy, manageability, controllability, strategic impact, connectivity and propinquity.
6. Prompt: 'For these top five risks, assess proximity (how soon it could occur) and dormancy (how long before we would notice it).' A high-dormancy risk needs a detection mechanism, not just a response.
7. Update your risk register with the agreed scores, the factor assessments and a priority ranking. Share your top three risks with the class.

Check your work

Check: Your top ten risks have group-agreed scores, your top five carry proximity and dormancy assessments, and you can explain why AI scoring alone is not sufficient.

Remember: GenAI gives you a fast first draft. Check every figure, source and assumption before the output leaves your hands - you remain accountable for it.
