

Activity 25 Instruction Manual

Activity 25 | Topic 03 | C013 | Version v1.0

Purpose

The final activity runs the end of the project lifecycle: processing a change request through integrated change control, then closing the project and capturing lessons learned with GenAI's help.

Files used

- activity-guide.md and activity-guide.pdf - brief and source instructions
- prompts.pdf - reusable prompt and verification checklist
- mock-data.xlsx - safe fictional project data for practice

Expected output

A processed change request with impact analysis, and a project closure report.

Before you begin

1. Form the required group and assign one person to capture evidence.
2. Open mock-data.xlsx and review the title, note and column headings.
3. Open prompts.pdf beside your chosen GenAI tool. Do not upload confidential workplace data.

Detailed procedure

1. In your group, raise a realistic change request against your project - a new regulatory requirement, or a stakeholder asking for an extra feature.
2. Classify it correctly: is it corrective action, preventive action, defect repair, or a change to a baseline? Only the last requires a baseline update.
3. Prompt GenAI: 'Analyse the impact of this change request on scope, schedule, cost, quality and risk. For each, state the impact and how confident you are in the estimate.'
4. Check the impacts it forgot. It will usually cover scope, schedule and cost, and skip the knock-on effects on quality, risk, resources and stakeholder expectations.
5. Run it through integrated change control: raise the request, analyse the impacts, record it in the change log, take it to the Change Control Board for approval/deferral/rejection, and communicate the outcome back to the requester.
6. Now open <https://alfredang.github.io/digitaltransformation/> - one member enters their name and clicks 'Create New Roadmap'; the others join with the Roadmap ID or QR code from the Invite button.
7. Add your project's remaining initiatives (title, phase, status, priority, owner, impact 1-10, effort 1-10, start month, duration). Prompt GenAI to propose the impact and effort scores, then adjust them as a group.
8. Read the Impact vs Effort matrix. Identify what falls in Quick Wins versus Thankless, and add your top risks to the Risk Register tab with likelihood, impact and mitigation. Add two or three KPIs with current and target values.
9. Move to closure. Prompt GenAI: 'Draft a project closure report covering: acceptance of deliverables, transition and handover requirements, contract closure, lessons learned on scope changes, schedule impacts, risks and issues, stakeholder and vendor relationships, and recommendations.'

10. Complete the closure checklist: deliverables accepted against acceptance criteria, product transitioned with training and hypercare, contracts and accounts closed, project information archived to organisational process assets, resources released.
11. Use the Export button in the Roadmap Studio to capture your roadmap, and share your closure report with the class.

Use the supplied mock data

Copy only the rows needed for the current step and tell the model the data is fictional. If the model changes an identifier or number, reject the change and rerun with an explicit preserve-values instruction.

Quality control

- Your change request is correctly classified with impacts on all five dimensions, it has been through the CCB path, and your closure report covers acceptance, transition, contracts, archiving and resource release.
- Compare the first AI draft with the final human-corrected artifact and retain both as evidence.
- Label assumptions, decisions, owners and dates so another project manager can audit the result.

Troubleshooting

If the response is generic, add the project objective, constraints, audience and required columns. If arithmetic is inconsistent, request formulas and substitutions, then calculate independently. If a source cannot be opened, remove the claim or replace it with verified evidence.

Submission evidence

Submit the completed project artifact, the final prompt, a short critique of the AI output, and any screenshot or exported file required by the activity.
